## High Temperature Abrasion Resistant Coating

### UPTO 2X PROTECTION

LOCTITE® PC 7000 High Temperature Abrasion Resistant Coating is a unique three component, rapid setting silica based composite coating system which offers protection from abrasion up to 1100°C. This is a water based environmentally friendly system. It bonds well to porous substrates like concrete, refractory bricks etc. (Metal surfaces need to be reinforced with metallic mesh before coating application.)

#### APPLICATION AREAS

- Coal burner nozzles
- Baffle plates of coal tip burners
- Refractory brick structure of chimneys

#### BENEFITS

- Upto 2 X protection from high temperature abrasion
- Cost effective: Better life, more efficiency
- Laminar flow of coal - air mixture for optimum efficiency

#### APPLICATION PROCEDURE

- Prepare the application surface by proper surface preparation-(Grid blasting/Grinding). After surface preparation ensure the surface is clean and free from dust, etc.
- Spot weld S.S diamond pattern wire mesh over the work piece as per the application requirement.
- Add part a and b to the container. Mix till uniform consistency and milky white color.
- Add ceramic fillers incrementally to liquid resin while mixing vigorously with air mixer for 2-3 mins until fillers are dispersed evenly. Use the entire qty of part a:part b:filler mix it well to prepare the homogenous mixture. No part mixing is allowed.
- Apply fully mixed material to prepared surface within 30 mins of mixing. Ensure 100% filling in mesh as per the required application thickness.
- Allow coating to cure at room temperature for 24 hrs. After room temperature cure, heat cure @ 350°C for 10 mins.
